ABOUT ME

Domicile: Hyderabad, India

Languages: English, Telugu, Hindi

Passionate Computer Science Engineering student at KMIT (CGPA 8.6) with hands-on experience in full-stack and AI-driven development. Skilled in the MERN stack, Java, and Python, with internship experience at IBaseIT and ODT. Dedicated to building scalable, intelligent solutions that create real-world impact.

EDUCATION

2023 - 2027

Keshav Memorial Institute of Technology

- B.Tech, CSE

EXPERIENCE

IBaseIT

MAY 2024 - JUNE 2024

- GradeSync is a student grade management system that uses Python, PHP, and SQL to add, display, and calculate student grades efficiently. It streamlines managing student data and class averages through a web-based interface.
- Tech Stack:** Python, HTML, CSS, MySQL
- Received Letter of Recommendation from Director of Software Engineering for outstanding performance, teamwork, and quick learning.
- [Recommendation Letter](#)
- <https://github.com/AnishaPaturi/GradeSync.git>

ODT

APRIL 2025 - JUNE 2025

- PythonLonden is a migration and modernization project that converts Londen's legacy PHP Symfony 1 Campaign Manager into Python to improve maintainability, scalability, and performance. The original platform includes dashboards for mailed campaigns, response tracking, and data visualization.
- Tech Stack:** Python
- GitHub: <https://github.com/AnishaPaturi/PythonLonden.git>

SKILLS

- Front End:** HTML, CSS, JS, React
- Middle Tier:** C, Java, Python, C++
- Back End:** MySQL, MongoDB, Express.js, Node.js
- Frame Works:** Bootstrap, SpringBoot(Basics)
- AI/ML:** Machine Learning, Deep Learning, Transformers, GenAI, Streamlit, TensorFlow, Keras, PyTorch, Transformers, Vision Transformer (ViT)
- Agentic AI:** LangChain, LanGraph
- Cloud & DevOps:** AWS, Docker, Kubernetes
- Computer Science Fundamentals:** Data Structures & Algorithms (DSA), Algorithm Analysis, Problem Solving, Competitive Programming
- Backend Concepts:** Pagination, Idempotency, Caching (Redis Basics)
- Tools & Platforms:** Git, GitHub, Jupyter Notebook

PROJECTS

CareerPilot-AI

APRIL 2026- JUNE 2026

Developed an AI-powered end-to-end career readiness and campus placement automation platform designed to streamline student preparation and recruiter hiring workflows. Built a microservices architecture featuring an AI Mock Interview Simulator that evaluates user responses with real-time semantic analysis, grading, and feedback. Integrated an ATS resume analyzer with automated job-matching and auto-apply engines, a dynamic DSA Roadmap.Planner synced with LeetCode progress, and a collaborative knowledge base supporting document vector chat, summarization, and quiz generation. Configured dynamic WebSocket STOMP notification feeds, role-based access control (Student, Recruiter, Admin), and full-scale production deployments.

Tech Stack: React, Vite, Tailwind CSS, Spring Boot, Spring Security, FastAPI, PostgreSQL, WebSockets (STOMP), OpenRouter API, LLMs, Docker, Render, Vercel, and Git/GitHub.

<https://github.com/AnishaPaturi/CareerPilot-AI.git>

VizTalk

MARCH 2026

Developed a Conversational BI Dashboard, an **AI-powered business intelligence platform** that enables non-technical users to generate interactive data visualizations using natural language queries. Built an intelligent query engine that converts user prompts into **SQL queries using LLM integration**, executes them on a **SQLite database**, and dynamically renders interactive charts and dashboards. Implemented real-time analytics, conversational querying, chart auto-selection, and persistent chat storage to simplify data exploration and business reporting workflows.

Tech Stack: Python, FastAPI, Streamlit, Plotly, Pandas, SQLite, OpenRouter API, DeepSeek LLM, REST APIs, and Git/GitHub.

<https://github.com/AnishaPaturi/VizTalk.git>

Mood Angels

AUGUST 2025 - DECEMBER 2025

Developed SentinelX, a **full-stack cybersecurity platform** for automated network scanning, vulnerability assessment, and intrusion detection. Built a scalable security dashboard capable of concurrent subnet discovery, port scanning, service banner grabbing, CVE mapping, packet capture, threat detection, and risk scoring to help identify network vulnerabilities in real time. **Implemented role-based access control**, interactive network topology visualization, compliance reporting, PDF audit generation, and **AI-assisted threat analysis** while optimizing the scanning engine using multithreading for improved performance and responsiveness.

Tech Stack: Java, Spring Boot, React.js, Java Swing, Spring Security, JWT Authentication, Docker, H2/MySQL, Pcap4J, Maven, REST APIs, HTML, CSS, JavaScript, and Git/GitHub.

<https://github.com/AnishaPaturi/SentinelX> | <https://sentinel-x-beta-pink.vercel.app>

SentinelX – Network Security Audit Suite

MARCH 2026 - APRIL 2026

Developed Mood-Angles, an **AI-powered mental health** and telepsychiatry platform designed to help users track emotional well-being, gain predictive mental health insights, and connect with certified psychiatrists through an integrated appointment system. Built a secure and **scalable full-stack application** featuring intelligent mood tracking, machine learning-based wellness recommendations, secure medical profile management, real-time therapy session scheduling, and enterprise-grade **authentication with Google OAuth integration**. Designed a responsive, modern user interface focused on accessibility, user engagement, and seamless cross-device experience.

Tech Stack: React.js, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, Python, Scikit-learn, Pandas, JWT Authentication, Google OAuth, REST APIs, and Git/GitHub.

<https://github.com/AnishaPaturi/Mood-Angles.git>

Safe Street

APRIL 2025 - JUNE 2025

Developed SafeStreet, an **AI-powered road maintenance platform** consisting of a mobile application and web-based management system designed to streamline road damage detection, reporting, and monitoring. Built a React Native mobile app that enables users to upload road damage images, leverage **AI-based classification** for identifying damage severity, generate automated summaries, and share reports through email integration. Developed a complementary web platform for authorities featuring user authentication, damage report management, **NLP-powered chatbot** support, and real-time status tracking to improve maintenance workflows and civic response efficiency.

Tech Stack: React Native, Expo, React.js, Vite, Node.js, Express.js, MongoDB, Mongoose, Python, Flask, Google Gemini AI, Natural NLP, Nodemailer, React Router DOM, REST APIs, and Git/GitHub.

<https://github.com/AnishaPaturi/SafeStreet-final.git>

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** : Completed 22.5-hour training on AWS fundamentals, including cloud architecture, core services (EC2, S3, RDS), security best practices, and pricing models.

COLLEGE ENGAGEMENT

- 1st Position in a hackathon in GeeksForGeeks, 2026
- 3rd place in an AGentic AI Hackathon
